DETAILED ACTION

1. Applicant's amendment filed on 12/31/2001 in response to Examiner's Office Action has been reviewed. Claims 17, 18, 24, and 25 are canceled, claims 29-40 are added, and claims 1 and 6 are amended. The following rejections now apply.
2. Claims 1-16 and 29-40 are presented for examination.
3. Steere, Jr. et al., Gee et al., and Ohdake et al. were cited as prior art in the last office action.
4. Applicant's arguments filed 12/31/2001 have been fully considered but they are not persuasive.
5. In the remarks, applicants argued in substance that (a) Steere does not disclose providing a signal representing the user-supplied entry from one PCMCIA card to the other PCMCIA card; rather it appears that the input device of each of the Steere PCMCIA cards only provides a user input signal to that card, and not the other PCMCIA card.
6. The examiner respectfully disagrees with applicant's position.

For the point (a), Steere discloses that one PCMCIA card is electrically interconnected [col. 9, lines 5-6] and communicating [col. 8, lines 46-48] with the other PCMCIA card.

Therefore, Steere teaches that one PCMCIA card having a user input device provides a signal representing user-supplied entry to the other PCMCIA card (which having an operating system [col. 8, line 42]).

As to claims 1, 7, and 40, Steere teaches a wallet [fig. 9; col. 1, lines 33-34] for use with a personal information device [PCMCIA card; col. 1, lines 23-27], said wallet comprising:

a first portion [col. 8, lines 43-60] including an input device [col. 4, lines 15-19] for receiving a user-supplied entry; and

a second portion [col. 8, lines 23-42] rotatably coupled to said first portion, said second portion being adapted to receive and detachably retain a personal information device [PCMCIA card; col. 1, lines 23-27] in the form of a PCMCIA card, said second portion including supply means electrically coupled [col. 9, lines 1-6] to said input device and being adapted to supply [col. 8, lines 42-48] a signal representing said user-supplied entry said personal information device.

9. As to claim 12, Steere teaches a wallet [fig. 9; col. 1, lines 33-34] in combination with a personal information device (PCMCIA card; col. 1, lines 23-27), the combination comprising:

a wallet first portion [col. 8, lines 43-60] including an input device [col. 4, lines 15-19] for receiving a user-supplied entry;

input means for receiving [col. 8, lines 1-5] data from said wallet when said

personal information device is retained therein,

and said wallet second portion includes output means for providing [col. 8, lines 42-48] said user-supplied entry as an output of said wallet to said input means of said personal information device.

10. As to claims 29 and 35, Steere teaches a wallet [fig. 9; col. 1, lines 33-34] for use with a personal information device [PCMCIA card; col. 1, lines 23-27], said wallet comprising:

a first portion [col. 8, lines 43-60] including an integrated input device [col. 4, lines 15-19; figs. 4-6] for receiving a user-supplied entry; and

a second portion [col. 8, lines 23-42] rotatably coupled to said first portion, said second portion being adapted to receive and detachably retain a personal information device [PCMCIA card; col. 1, lines 23-27] in the form of a PCMCIA card, said second portion including supply means electrically coupled [col. 9, lines 1-6] to said input device and being adapted to communicate [col. 8, lines 42-48] with said personal information device.

14. The rejections for claims 2-6, 8-11, and 13-16 are respectfully maintained for the reasons set forth in the last office action.

15. As to claims 30-34 and 36-39, see the reasons for rejections of claims 2-6 and 8-11 respectively.
